- Beware of Tricky or Similar Options

Some choices may be similar or partially correct?ensure your selection aligns precisely with what the question asks.

Sample Questions and Detailed Explanations

To illustrate, here are some typical MCQs, along with detailed explanations to help you understand the reasoning process.

Question 1:

Which of the following best defines biodiversity?

a) The number of individual organisms in a habitat

b) The variety of life forms on Earth, including species, genetic, and ecosystem diversity

c) The amount of biomass present in an ecosystem

d) The process of natural selection acting on populations

Correct answer: b) The variety of life forms on Earth, including species, genetic, and ecosystem diversity

Explanation:

Biodiversity encompasses the total variety of biological entities, including different species, genetic variations within those species, and the range of ecosystems. It is not just about the number of organisms or biomass but about the diversity of life at multiple levels.

Question 2:

Which of the following is an example of in-situ conservation?

a) Establishing a wildlife sanctuary within a national park

b) Maintaining endangered seeds in a seed bank

c) Breeding programs in a zoo

d) Introducing invasive species to control pests

Correct answer: a) Establishing a wildlife sanctuary within a national park

Explanation:

In-situ conservation involves protecting species within their natural habitats. Establishing wildlife sanctuaries or national parks allows species to live and thrive naturally. The other options (b and c) are ex-situ strategies, and introducing invasive species is generally harmful to biodiversity.

Question 3:

Which factor is most responsible for the current high rates of species extinction?

a) Natural evolutionary processes

b) Habitat destruction caused by human activities

c) Increased genetic variation in populations

d) Decrease in predator populations

Correct answer: b) Habitat destruction caused by human activities

Explanation:

While natural processes do cause some extinctions, the current rapid rates are largely due to human

activities such as deforestation, urbanization, and pollution. These activities destroy or fragment habitats, making it difficult for species to survive.
