Infection-Specific Guidance

Lower Respiratory Tract Infections

The guide delineates empiric and definitive therapy options for community-acquired pneumonia,

hospital-acquired pneumonia, and ventilator-associated pneumonia. For example, it recommends:

- For community-acquired pneumonia: Macrolides or doxycycline as first-line agents in outpatient settings, with beta-lactams or respiratory fluoroquinolones for hospitalized patients
- For hospital-acquired pneumonia: Covering Pseudomonas and MRSA when indicated, with agents like piperacillin-tazobactam or ceftazidime, combined with vancomycin for MRSA coverage

Urinary Tract Infections (UTIs)

Treatment suggestions are stratified by uncomplicated versus complicated UTIs, with considerations such as:

- Pathogen prevalence (E. coli as predominant)
- Resistance patterns (e.g., ESBL producers)
- Appropriate agents like nitrofurantoin, fosfomycin, or fluoroquinolones, taking into account local susceptibilities

Skin and Soft Tissue Infections

Effective management strategies include:

- Use of beta-lactams for cellulitis caused by streptococci
- MRSA coverage with agents like clindamycin or trimethoprim-sulfamethoxazole when indicated
- Considerations for necrotizing infections, requiring broad-spectrum antibiotics and surgical intervention

Central Nervous System Infections

The guide underscores the importance of achieving adequate CNS penetration and tailoring therapy accordingly:

- Judicious selection of empiric therapy based on local antibiograms
- Narrowing therapy once pathogen susceptibilities are known
- Avoiding unnecessary antibiotic use in viral infections or colonization
- Monitoring for adverse effects and drug interactions

This approach is vital in curbing the rise of resistant organisms, preserving antimicrobial efficacy, and reducing healthcare costs.

Special Populations and Considerations

Children and Pediatrics

Dosing adjustments are provided for pediatric patients, considering age, weight, and developmental pharmacology. The guide highlights safety concerns, especially with fluoroquinolones and tetracyclines.

Pregnant and Lactating Women

Certain antimicrobials are contraindicated or require caution due to teratogenicity or transfer into breast milk. The guide offers alternatives and safety profiles to assist clinicians in balancing maternal and fetal health.

Patients with Renal or Hepatic Impairment

Dosing modifications are essential to prevent toxicity, with recommendations for dose adjustment or interval prolongation based on renal function tests like serum creatinine or estimated glomerular filtration rate (eGFR).

Immunocompromised Hosts

The guide discusses the selection of broad-spectrum agents and prophylactic strategies in immunosuppressed populations such as transplant recipients or chemotherapy patients.

Limitations and Evolving Landscape

While the Sanford Antimicrobial Guide 2014 provides a thorough snapshot of antimicrobial management at the time, it also has limitations:

- Rapidly changing resistance patterns mean some data may be outdated
